PROFESSIONAL SUMMARY

Computer Science student at American University of Sharjah specializing in AI and Data Science, with hands-on experience in machine learning and data-driven application development. Skilled in building and evaluating ML models, applying ensemble methods, and deploying end-to-end Python applications. Passionate about leveraging AI to solve real-world problems.

EDUCATION

BSc in Computer Science, minor in Data Science - American University of Sharjah

2023 – Present

- Currently with a CGPA of 3.78
- Recipient of Sharakah Scholarship
- Recipient of Chancellor's List Scholarship

EXPERIENCE

Core Team, Google Developers Group | American University of Sharjah

September 2025 – Present

- Coordinated hands-on AI/ML and technology workshops, managing speaker logistics and participant engagement for technical sessions across the university community.

Grader and Mathematics Tutor | American University of Sharjah

September 2025 – December 2025

- Graded assignments for undergraduate Computer Science courses and provided tutoring to support students' mathematical understanding.

Software Engineering Intern | Lattice Software Solutions

August 2025 – September 2025

- Automated document filtering using Python and Pandas, reducing manual processing time by 55%.
- Built receipt-generation scripts improving accuracy and eliminating repetitive manual entry.
- Integrated OpenAI APIs to build LLM-powered document generation pipelines, improving workflow efficiency and output quality.

PROJECTS

Online Shoppers Purchasing Intention | R, caret, XGBoost, Random Forest

- Built a 7-model ML pipeline in R to predict e-commerce purchase intent on 12,330 sessions, achieving 93.99% accuracy with Random Forest using SMOTE, PCA, and ensemble methods.

Industrial HR Management System | Java, Oracle SQL, JDBC

- Designed relational database (10+ tables) and implemented role-based CRUD operations using JDBC.

Music Recommender App | Python, Streamlit, NLTK, scikit-learn

- Built a content-based music recommender with a Streamlit UI, applying TF-IDF vectorization and cosine similarity on 10,000 songs to surface lyrically similar tracks.

Gym Face Recognition App | Python, OpenCV

- Developed real-time facial recognition system for automated attendance using computer vision.

TECHNICAL SKILLS

Programming: Python, C++, Java, SQL, R

Web: HTML, CSS, JavaScript

ML/AI: scikit-learn, XGBoost, Random Forest, SMOTE, NLP, TF-IDF, cosine similarity, PCA

Tools: NumPy, Pandas, OpenCV, NLTK, Streamlit, OpenAI API

CERTIFICATES

Nanyang Technological University Singapore - Introduction to Artificial Intelligence

Hewlett-Packard - AI Internship for Young Achievers

QS - Future17 Sustainable Development Goals Challenge

Google Foundation of Cybersecurity Certificate
